

If **YOU** suffer from Carpal Tunnel...

YOU COULD BENEFIT FROM **ENDOSCOPIC CARPAL TUNNEL RELEASE**

Kristopher Avant, DO, Orthopedic Surgeon — Specializing in the Upper Extremity

Endoscopic surgery is a great solution for patients that have tried conservative treatments and are still experiencing pain. Traditional surgery for carpal tunnel release involves up to a 2 inch scar, while endoscopic surgery involves a single half-inch incision. The result is minimal scarring and the potential for a faster recovery.
